HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

Application Status

1. In response to the previous Office action, a Final rejection (mailed on 09/13/2010), Applicants filed a response and amendment received on 11/09/2010, which were not entered in view of Advisory Action mailed out on 11/26/2010.

Thus, according to claims filed on 07/15/2010, claims 2, 4-18, 20 and 24 are pending.

However, in view of Examiner's amendment set forth below, claims 2, 7-11, 14-18 and 20 are allowed.

Terminal disclaimers

2. The terminal disclaimers filed on 11/19/2010 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Pat. 7,863,420 which is issued from US patent application number 10/594,453 has been reviewed and is accepted. The terminal disclaimers have been recorded.

Examiner's amendment to the Claims

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment shown below was given by Chalin Smith on Jan. 7, 2011.

Replace any previous claim set with the following claims.

1. Canceled.
2. A process for purifying wild-type von Willebrand factor (VWF) from a plasma fraction comprising steps of:
 - (i) providing a sample of plasma fraction containing wild-type VWF and one or more contaminating proteins comprising fibronectin and/or fibrinogen;
 - (ii) preparing the sample of plasma fraction in a first running buffer at pH of 7.0-7.5 that consists essentially of 10-50 mM sodium and/or potassium phosphate,
 - (iii) performing flow chromatography by loading the sample of plasma fraction to a hydroxylapatite matrix under conditions that 90% or more of fibronectin and/or fibrinogen bind to the hydroxylapatite matrix, while at the same time, less than 10% of the wild-type VWF bind to the hydroxylapatite matrix thereby providing a flow through fraction(s) containing purified wild-type VWF, wherein the flow chromatography is performed with the first running buffer; and
 - (iv) purifying wild-type VWF by collecting unbound wild-type VWF from the flow through fraction(s).
- 3-6. Cancelled.

Art Unit: 1656

7. The process according to claim 2, further comprising step of:

(v) performing binding chromatography by loading the purified wild-type VWF to hydroxylapatite matrix under a condition such that the wild-type VWF is bound to a hydroxylapatite matrix and then subsequently eluted, wherein the flow chromatography is performed with a second running buffer at pH 5.5-6.8.

8. The process according to claim 7, wherein the step (v) comprises: (a) binding the wild-type VWF to the hydroxylapatite matrix, (b) washing out impurities, and (c) eluting the wild-type VWF thereby further purifying the wild-type VWF.

9. The process according to claim 8, wherein the step (a) is performed by the second running buffer with 1 to 200 mM sodium and/or potassium phosphate.

10. The process according to claim 8, wherein the step (b) is performed by the second running buffer with 100 to 300 mM sodium and/or potassium phosphate.

11. The process according to claim 8, wherein the step (c) is performed with the second running buffer with 200 to 500 mM sodium and/or potassium phosphate.

12-13. Cancelled.

Art Unit: 1656

14. The process according to claim 2, wherein the sample of plasma fraction in step (i) has been previously purified.

15. The process according to claim 2, wherein the sample of plasma fraction in step (i) comprises a separately purified cryoprecipitate solution.

16. The process according to claim 2, wherein the sample of plasma fraction in step (i) comprises a cryoprecipitate solution precipitated with aluminum hydroxide.

17. The process according to claim 2, wherein the sample plasma fraction in step (i) comprises a chromatographically pre-purified cryoprecipitate solution precipitated with aluminum hydroxide.

18. The process according to claim 2, further comprising the step of performing a pH precipitation prior to step of carrying out flow chromatography with hydroxylapatite matrix to separate fibronectin.

19. Canceled.

20. The process according to claim 2, wherein the hydroxylapatite is fluoroapatite.

21-24. Canceled.

Statement of Reasons for Allowance

4. Claims 2, 7-11, 14-18 and 20 are allowed. The following is an examiner's statement of reasons for allowance:

The instant invention is drawn to a process for purifying wild-type von Willebrand factor from a plasma as shown in claim 2 above. Although, a protein purification method using hydroxylapatite is well known in the art, removing of fibronectin (and/or fibrinogen) from VWF containing plasma sample under a condition which results in 90% or more of fibronectin and/or fibrinogen binds to the hydroxylapatite matrix while majority of VWF protein (i.e., more than 90%, for example) does not bind to the hydroxylapatite (thereby collection of flow through fractions provides purification of VWR), wherein the conditions are created by preparing said plasma sample under the running buffer noted in step (ii) of claim 2, is novel and unobvious over hydroxylapatite chromatography purification process in the art.

In view of the examiner's amendment and approval of terminal disclaimers, all outstanding objection and rejections are withdrawn.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
